📚 DOCUMENTATION INDEX (Clear Version)

1️⃣ WORKFLOW: Create Automation from Scratch until Finish

When: Kamu kasih PRD, saya buat automation sampai bisa dijalankan di STG

Step 1.1: Understand Big Picture (5 min)

Tujuan: Tahu workflow dari PRD → automation live
📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Overview: 3 GATES + 6 PHASES"
Apa yang dipelajari: - GATE A: PRD → TSD (saya buat TSD dari PRD) - GATE B: TSD → TC (saya buat test case dari TSD) - GATE C: Phase 0-6 (saya create automation code) - Phase 5.5: Confirm STG (setup test di staging)

Step 1.2: Understand Rule - Apa itu "Executable" (10 min)

Tujuan: Tahu apa yang harus executable saat bikin automation
📖 **Read:** - `14-executability-principle.md` → Keseluruhan
Apa yang dipelajari: - SPEC layer: Assertions harus meaningful (bisa fail) - USECASE layer: API calls real endpoint (bukan mock) - PAGE layer: Selectors harus ada di UI - FACTORY layer: Data harus varied (bukan hardcoded) - PRE layer: Preconditions harus executable di dev/stg

---

Step 1.3: Understand Red Flags - Apa yang DILARANG saat code (10 min)

Tujuan: Tahu apa mistakes yang harus dihindari

📖 **Read:** - `16-assertion-design.md` → Keseluruhan

Apa yang dipelajari: - ❌ TAUTOLOGY: expect(true).toBe(true) — dilarang! - ❌ SWALLOWED ERROR: .catch(() => false) — dilarang! - ❌ HARDCODED VALUE: const email = 'test@test.co' — dilarang! - ✅ Gimana design assertion yang benar

---

Step 1.4: GATE A - Convert PRD → TSD (30 min)

Tujuan: Saya create TSD file (test scenario definition) dari PRD kamu

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "GATE A: TSD-writer (PRD → TSD)"

Apa yang saya lakukan: 1. Read PRD kamu 2. Create TSD file dengan 12 sections 3. Self-check quality 4. Output: TSD file (ask your approval)

Kamu perlu: Review TSD, kasih approval atau clarify

Step 1.5: GATE B - Convert TSD → TC (30 min)

Tujuan: Saya create test case + preconditions dari TSD

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "GATE B: testcase-writer (TSD → TC)"

Apa yang saya lakukan: 1. Create TC file (test case) per scenario 2. Create/reuse PRE (preconditions) files 3. Validate dengan validator-tsd-sync.py 4. Push ke staffinc-testcase repo

Kamu perlu: Informed saja, auto-commit

Step 1.6: GATE C Phase 0 - Intake (15 min)

Tujuan: Confirm scope dan ask environment questions

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Phase 0: Intake"

Apa yang saya lakukan: 1. Read TC dari staffinc-testcase 2. Ask questions: target env, test account, test data, cleanup 3. Create intake document

Kamu perlu: Answer environment questions

Step 1.7: GATE C Phase 1 - Grounding (20 min)

Tujuan: Verify bahwa setiap selector, endpoint, value bisa ditemukan di codebase

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Phase 1: Grounding" - `14-executability-principle.md` → Section "Layer 1: SPEC" ... "Layer 5: PRE"

Apa yang saya lakukan: 1. Find selector di UI code (cite file:line) 2. Find endpoint di API code (cite file:line) 3. Find expected values di TC 4. Create grounding document

Kamu perlu: Review grounding, approve atau flag yang gk bisa ditemukan

---

Step 1.8: GATE C Phase 2 - Design (20 min)

Tujuan: Design assertion per TC clause, error handling plan

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Phase 2: Design" - `16-assertion-design.md` → Keseluruhan

Apa yang saya lakukan: 1. Design assertion per Then/And clause 2. Verify: can fail? meaningful? from TC? 3. Plan error handling per layer 4. Create design document

Kamu perlu: Review design, approve

Step 1.9: GATE C Phase 3 - Mapping (15 min)

Tujuan: Map ke file structure (SPEC, USECASE, PAGE, FACTORY)
📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Phase 3: Mapping"
Apa yang saya lakukan: 1. Map: SPEC file path, USECASE path, PAGE path, FACTORY path 2. Identify PRE factory location 3. Create mapping document
Kamu perlu: Review, approve atau suggest changes

Step 1.10: GATE C Phase 4 - Implement (45 min)

Tujuan: Write code per DDD layer, add comments, create AUTOMATION-CHECKLIST

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Phase 4: Implement" - `16-assertion-design.md` → Section "Implementation Checklist" - `17-traceability-record.md` → Keseluruhan

Apa yang saya lakukan: 1. Code PRE factory (data generation) 2. Code USECASE (business logic) 3. Code PAGE (UI interactions) 4. Code SPEC (test assertions) 5. Add code comments: @covers, // src:, // expect: 6. Create AUTOMATION-CHECKLIST-.md 7. Run test

Output: - Code files (SPEC, USECASE, PAGE, FACTORY) - AUTOMATION-CHECKLIST-.md - Test result: PASSED

Kamu perlu: Informed saja, atau review code jika diminta

Step 1.11: GATE C Phase 5 - Verify (Dev) (15 min)

Tujuan: Run test di dev, collect evidence

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Phase 5: Verify" - `15-test-failure-reporting.md` → Jika test fail

Apa yang saya lakukan: 1. Run test di dev 2. Collect: screenshot, video, logs 3. Verify: PRE executed, all assertions pass

Output: - Test status: PASSED ✓ - Evidence files

Kamu perlu: Informed saja

Step 1.12: GATE C Phase 5.5 - Environment Confirmation (STG) (30 min)

⚠️ **PENTING:** Automation NOT "done" jika hanya pass di dev!
📖 **Read:** - `21-environment-confirmation-stg.md` → Keseluruhan
Apa yang saya lakukan: 1. Setup precondition di STG 2. Run test di STG (same code, different config) 3. Verify: PRE executable, test pass, cleanup working 4. Document: STG-ENVIRONMENT-SETUP.md, STG-TEST-RUN-RESULT.md 5. Get QA lead approval: "Regression ready?"
Output: - Test status: PASSED in STG ✓ - Documentation: environment setup + test result - Approval: QA lead sign-off
Kamu perlu: Approve atau flag issues di STG

Step 1.13: GATE C Phase 6 - PR Review & Merge (20 min)

Tujuan: Create PR, lead review, merge

📖 **Read:** - `19-pr-review-prerequisites.md` → Jika lead-nya baca ini

Apa yang saya lakukan: 1. Self-review checklist 2. Create PR dengan judul, description, evidence 3. Lead reviewer runs skill: automation-pr-review 4. Lead approve: APPROVED 5. Merge PR

Output: - PR merged ✓ - Automation live + regression-ready ✓

Status: SELESAI! 🎉

2️⃣ WORKFLOW: Review PR Automation (You as QA/Lead)

When: Ada PR automation yang kamu perlu review

Step 2.1: Find TC di staffinc-testcase (10 min)

Tujuan: Locate test case yang di-automate
📖 **Read:** - `19-pr-review-prerequisites.md` → Section "Step 1: Extract TC ID from PR" ... "Step 2: Locate TC"
Apa yang kamu lakukan: 1. Read PR title (ada TC-ID) 2. Search di staffinc-testcase repo: `grep -r "TC-ID" testcase/` 3. Find TC file 4. Note: path + TC ID

Step 2.2: Read & Understand TC (15 min)

Tujuan: Understand apa yang TC expect

📖 **Read:** - `19-pr-review-prerequisites.md` → Section "Step 3: Read TC Completely"

Apa yang kamu lakukan: 1. Read TC: Given/When/Then 2. Understand: PRE, actions, expected results 3. Ask: Can this be executed in dev/stg? Data varied? 4. Check: All clauses clear?

Output: Clear understanding dari TC

Step 2.3: Review PR Code (Executability) (20 min)

Tujuan: Check apakah code bisa dijalankan per layer

📖 **Read:** - `14-executability-principle.md` → Section "Checklist per layer" - `19-pr-review-prerequisites.md` → Section "Step 4: Map PR to TC"

Apa yang kamu check: - SPEC: Has @covers TC-ID? - USECASE: Calls real API (bukan mock)? - PAGE: Selectors grounded (ada di UI)? - FACTORY: Data varied (bukan hardcoded)? - PRE: Precondition called?

Step 2.4: Review PR Code (Red Flags) (15 min)

Tujuan: Check apakah ada mistakes

📖 **Read:** - `16-assertion-design.md` → Section "Red Flags During Code Review"

Apa yang kamu check: - ❌ Tautology? expect(true).toBe(true) - ❌ Swallowed error? .catch(() => false) - ❌ Hardcoded value? 'test@test.co' - ❌ Missing assertion? TC clause tanpa expect()

Step 2.5: Verify AUTOMATION-CHECKLIST (10 min)

Tujuan: Confirm traceability

📖 **Read:** - `17-traceability-record.md` → Section "What to Record"

Apa yang kamu check: - ✅ AUTOMATION-CHECKLIST-.md exists? - ✅ All TC clauses listed? - ✅ Each clause has assertion? - ✅ Red flags checked?

Step 2.6: Run Skill: automation-pr-review (10 min)

Tujuan: Let skill do automated checks

📖 **Read:** - PR review skill documentation

Apa yang kamu lakukan:

```
/automation-pr-review --pr-url <PR_URL> --tc-id <TC-ID>
```

Output: - Layer 1: Static code findings - Layer 2: Traceability findings - Layer 3: Executability findings

---

Step 2.7: Make Decision (5 min)

If APPROVED:

```
✓ All checks pass
✓ No blockers
→ Merge PR
→ Automation live
```

If REQUEST_CHANGES:

```
✗ Found blocker
→ Comment PR with findings
→ Engineer fixes
→ Repeat from Step 2.3
```

3️⃣ WORKFLOW: Fix PR from Feedback (You as Engineer)

When: Lead bilang REQUEST_CHANGES, ada findings yang harus di-fix

Step 3.1: Read Feedback (10 min)

Tujuan: Understand apa yang harus di-fix

📖 **Read:** - `20-fix-pr-from-feedback.md` → Section "Step 1: Read PR Review Feedback"

Apa yang kamu lakukan: 1. Read setiap finding 2. Understand: apa masalahnya, kenapa masalah 3. Categorize: SPEC issue? USECASE issue? PAGE issue? FACTORY issue?

Step 3.2: Fix Issue per Layer (30 min)

Tujuan: Fix setiap issue

📖 **Read:** - `20-fix-pr-from-feedback.md` → Section "Step 2: Categorize Issues" ... "Step 3: Fix Each Issue" - `16-assertion-design.md` → Reference untuk error handling, assertion design

Apa yang kamu lakukan: 1. FACTORY issue: Remove hardcoded, use faker 2. USECASE issue: Propagate error, don't swallow 3. PAGE issue: Ground selector, add // src: comment 4. SPEC issue: Add missing assertion, add // expect: comment

---

Step 3.3: Run Test (10 min)

Tujuan: Verify fixes work

📖 **Read:** - `18-e2e-prd-to-automation.md` → Section "Phase 5: Verify"

Apa yang kamu lakukan:

```
npm test -- create-employee.spec.ts
```

Expected: Test PASSED ✓

Step 3.4: Update AUTOMATION-CHECKLIST (10 min)

Tujuan: Document yang sudah di-fix

📖 **Read:** - `20-fix-pr-from-feedback.md` → Section "Step 4: Update AUTOMATION-CHECKLIST"

Apa yang kamu lakukan: 1. Add section: "Fixes Applied (from PR review)" 2. List semua fixes 3. Update assertions/data/handling sesuai fix 4. Mark: Red flags = 0, All TC clauses = covered

---

Step 3.5: Push Fix Commit (5 min)

Tujuan: Push fixes ke PR

📖 **Read:** - `20-fix-pr-from-feedback.md` → Section "Step 6: Create Fix Commit"

Apa yang kamu lakukan:

```
git add [fixed files]
git commit -m "fix: address PR review findings for DF-M1-POS-001

- Fix #1: Add assertion for status = DRAFT
- Fix #2: Replace hardcoded email with faker
- Fix #3: Propagate error in usecase
- Fix #4: Add PRE verification

All PR review findings addressed. Test passing. Ready for re-review."

git push origin feature/create-employee-automation
```

Step 3.6: Request Re-Review (5 min)

Tujuan: Ask lead untuk review ulang

📖 **Read:** - `20-fix-pr-from-feedback.md` → Section "Step 7: Push & Re-request Review"

Apa yang kamu lakukan: 1. Comment di PR:

```
@lead-reviewer

All findings from PR review addressed:
✅ Fix #1, #2, #3, #4

Test re-run: PASSED ✓
AUTOMATION-CHECKLIST updated: YES ✓
Ready for re-review.
```

1. Lead re-review → APPROVED → MERGE

Status: SELESAI! 🎉

📖 SUMMARY: Gunakan Index Ini Seperti Ini:

```
Kamu sedang fase/scenario apa?

1. Create automation from scratch?
   → Baca Step 1.1 → 1.2 → 1.3 → ... → 1.13
   → Selesai automation live

2. Review PR automation?
   → Baca Step 2.1 → 2.2 → ... → 2.7
   → APPROVED atau REQUEST_CHANGES

3. Fix PR from feedback?
   → Baca Step 3.1 → 3.2 → ... → 3.6
   → Re-review → MERGE
```

🎯 Setiap Step:

```
Step [number]: [Tujuan]

📖 Read: [File yang dibaca]

Apa yang saya/kamu lakukan:
1. ...
2. ...

Output: ...

Kamu perlu: ...
```

Gini lebih jelas kan? Pakai ini sebagai workflow checklist! ✅
